

Vibe Check: Planning

Madison, Kyle,
Sam, Victor

Work Schedule & Synchronous Meetings

Individual hours

Madison: Fri/Sat 7:30-10:00 pm

Kyle: Wed/Thurs 6:30-8:30 pm

Sam: Tues/Thurs 8:00-9:30 pm

Victor: Tues/Thurs 8:00-9:30 pm

Team meetings

Meeting Block 1: Mondays
7:30-8:30pm

Meeting Block 2: Wednesdays
7:30-8:30pm

Mentor Meeting Block: Thursdays
before class

*Fridays are a backup day

Operations

Tech Stack

A hand-drawn rectangular box with a thick black border and a hatched pattern on the left side.

HTML, CSS,
JavaScript

SQL and Python

Two lines of text describing the tech stack, with a four-pointed star to the left.

Source Ctrl

A hand-drawn cloud shape with a thick black border.

Github Repository

<https://github.com/MonadNomady/VibeAI>

Two lines of text describing the repository, with a four-pointed star to the left.

Conflicts

A hand-drawn notepad with a thick black border and a spiral binding on the left side.

Some of us have
conflicts that we have
discussed personally.
We decided to
delegate as needed.

Four lines of text describing conflicts, with a four-pointed star to the left.

Storyboard & Screen flow

first page

Here they choose their challenge and create an experimental sentence to throw at the AI. They are also given sample sentences to try out. Once they decide their challenge and sentence, they hit the “Analyze Message” button to progress.

Storyboard & Screen flow

"Your Turn"

Before being given the AI pipeline and results, they get a shot at categorizing the tokens of their sentence by placing them on the vibe scale. Any tokens they are unsure of or they believe are neutral stay in the tray. After, they disclose their confidence in their own answer and then press the button to progress.

The screenshot displays the 'VIBE CHECK' application interface. At the top, a navigation bar includes a green checkmark icon, the text 'Input Challenge', a 'Your Turn' button, an 'AI Pipeline' button, and a 'Tweak & Learn' button. The main content area is titled 'THE VIBE SCALE' and contains the instruction 'Click each word onto the scale - is it positive or negative?'. Below this, there are three main sections: 1. A scale with a red box labeled 'NEGATIVE' containing the word 'so' and a green box labeled 'POSITIVE' containing the words 'wow' and 'thanks'. 2. A section titled 'NEUTRAL TOKENS (DRAG TO SCALE OR LEAVE IF NEUTRAL)' containing the words 'Oh', '.', 'so', and 'much'. 3. A section titled 'SCALE TILT: LEANING POSITIVE' showing 'YOUR CALL' and 'YOUR CONFIDENCE' at 72%, with a progress bar and the text 'How sure are you about your analysis?'. Below the confidence section is a 'YOUR SENTIMENT MAPPING' section showing the words 'so', 'wow', and 'thanks' in their respective colored boxes. At the bottom, there is a large button labeled 'Lock in and Reveal Results →'.

Storyboard & Screen flow

AI Pipeline

This page shows how the AI Broke down their sentence and tokens using sentiment analysis. And the final sentiment or “vibe” the AI came to. If the student fails their challenge, they press the continue button to the tweak lab, where they get the chance to edit their sentence and see what changes. Otherwise they completed their challenge and get sent to the first screen to try another.

Storyboard & Screen flow

Tweak and Learn

Here the student will choose a token to edit in an attempt to complete their challenge. They will reflect on what they learned through the pipeline to help them. After completing the challenge they can try again or try another challenge.

VIBECHECK

☒ Input Challenge ☒ Your Turn ☒ AI Pipeline ☒ Tweak & Learn

TWEAK LAB

CHANGE A SINGLE TOKEN AND WATCH THE SENTIMENT VECTOR SWING

CHALLENGE COMPLETE /

Oh

wow

.

thanks

so

much

😊

Type your replacement word..

Apply

BEFORE

Sarcastic / Frustrated

-0.4

AFTER

Genuine Positive

+0.6

WHAT DO YOU FEEL YOU LEARNED?

SENTIMENT ANALYSIS

AI assigns static weights to words, then processes contextual layers to compute an overall metric shift.

WORD EMBEDDINGS

Words map to coordinate systems. Closely aligned words inhabit mutual cluster segments to preserve spatial logic.

AI ETHICS + BIAS

Models fail when encountering non-standard grammar, slang, or community dialects due to underlying training bias.

CHALLENGE COMPLETE!

You engineered cognitive dissonance successfully and discovered how AI model heads compute semantic contradiction.

Next Challenge →

TRY ANOTHER MESSAGE

Data Gathering & Record Structure

We will be collecting data on all the user input from the students. This would include the sentences that they create, their inputs to the scale, their sentiment guess, and whether or not they passed the challenge. We will also record how often they open the tool tip for a more in depth explanation of the AI's reasoning on the results page. All this will be stored in a database using mysql or sqlite.

Timeline

Week of Sept 21

Establish
requirements,
wireframes, and
architecture

Week of Sept 28

Begin web app
development, build
database schema

Week of Oct 5

Finish web app
development,
integrate UI workflow

Week of Oct 12

Walkthrough full build
and begin QA testing

Week of Oct 19

Bug fixing, pilot
testing

Week of Oct 26

Live deployment with
students

Signatures

By signing below, all team members agree to honor this work plan, meeting schedule, and development milestones.
